OOHVIES

Filmmaker Delivery Instructions

1. Create your film delivery folder

Use Google Drive or Dropbox. Create one main folder named after your film. Keep the folder and its files available throughout review and delivery.

2. Film assets

Full movie: Preferred Apple ProRes 422 HQ master; acceptable high-bitrate MP4 at a minimum of 20 Mbps. Resolution: 1920 x 1080 (HD) or 720 x 480 (SD). Final cut only; no countdowns, bars, or 2-pop. Audio: stereo and/or 5.1 mix in WAV or MOV.

Trailer: ProRes HQ or high-bitrate MP4. No “Coming Soon,” “Now Available,” URLs, or websites.

Poster / key art: Layered PSD, at least 2000 x 3000 pixels, RGB, 72 DPI, 2:3 ratio. No festival laurels, credit block, URLs, or nudity.

Captions / subtitles, if available: SRT, SCC, ITT, STL, or TXT.

3. Metadata and information

Include film title, release date, runtime in minutes, HD or SD format, stereo or 5.1 sound, primary and secondary genres, MPAA or TV rating, director, writers, producers, and 3-5 lead actors with their character names.

Also include a short synopsis (about 150 words), a 1-2 sentence logline, IMDb link if available, trailer link if already uploaded, and an optional YouTube or Vimeo screener link.

4. Share and submit

Set the folder sharing permission to “Anyone with the link can view” or the equivalent Dropbox setting. Make sure Oohvies can view and download the files without requesting access. Test the link in a private/incognito browser window. Anyone receiving a shared link may be able to access its contents; include only the materials you intend to submit.

Paste the shared folder link into the **Google Drive or Dropbox folder link** field in your Oohvies film application. Do not put passwords in the URL. Keep ownership and clearance documents in the portal's separate document-upload section. Submission does not automatically publish your film.
